I never thought that I would be at the point in my career where I could say that I know the people in who publish in Scientific American. 😊

My former graduate advisor, Dr. Sushil K. Atreya, has an article in the May 2007 issue of SciAm. It is entitled "The Mystery of Methane on Mars and Titan". The article discusses the implications of the presence of methane on the geological processes and on biological processes of both Mars and Titan.

Best regards,  
Scott

Thanks for the heads-up, Scott.

Do you have link to a preprint pdf?

Jason,

The URL to the articles is:

<http://www.sciam.com/article.cfm?chanID=sa006&colID=1&articleID=DD4E05D3-E7F2-99DF-323CC9F024BB5AA0>

One would have to purchase the issue for \$5. Otherwise, they would have to purchase the magazine at their favorite newsstand.
